Call for Quote

Overall length: 4.7 in. (120mm)

For Tension Control On:

- ◆ Volkmann / Verdol / ICBT / Hamel and Muschamp Cablers
- ◆ Superba Heatset Creels
- ◆ Any other application that requires smooth yarn tension

Smooth Control

The Epic Dial Storage Tensor EE380114-2A provides extremely smooth control of yarn tensions and allows for rapid dial-controlled tension adjustment when a different type of yarn is run on the machine.

Improved Yarn Quality

The Epic Dial Storage Tensor's design keeps all yarn contact over ceramics, eliminating the pinching and fiber damage that can result from using ball, disc, or capsule-type devices as they wear.

Smooth Operation

The Epic Dial Storage Tensor's built-in reserve compensates for yarn bundle irregularities, splices, and inherent tension variations during package unwinding. There is virtually no yarn jerking when using the Epic Dial Storage Tensor.

Durable Design

Large-diameter pins (3.5mm) for high-speed take-up of carpet and other heavy yarns.

Easily Adaptable

Many standard mounting brackets are available. Epic can also design brackets to fit your needs.

Low Maintenance

Designed for easy cleaning, the Epic Dial Storage Tensor is extremely easy to maintain.

Volkmann and Hamel are trademarks of Saurer
Verdol and ICBT are trademarks of ICBT
Superba is a trademark of Superba SA
Muschamp is a trademark of Muschamp Machine Services
